ABSTRACT

In the modern world everyone is undergoing busier lives than ever. People do not have time to read newspapers and random websites to search for job opportunities. To overcome this problem, we created "Job Seeker". This is a free job vacancy app which is mainly designed to help IT job seekers who sleep and dream of Python, Ruby on Rails, JavaScript, Blockchain, AR/VR and data science to find the latest local and international job openings in their field. Also, the companies that offer jobs can find employees with required qualifications using "Job Seeker". Users can simply register for the app and can find their dream jobs in all career levels, part time jobs and internships in an easy and convenient way through this app whether they are a fresh graduate or an experienced professional. It can be used to keep an eye on the employment market even once they have found an employment. It will keep them up to date with the changing job market and never let them miss your next best career. If they are searching for a job the home page of the app will help you to find a job. If they find the they need they can contact the company and apply for the job by a simple touch of a button, they can post a job request. They can market yourself by adding your educational qualifications, experience in the field and other qualifications to the job request., finding one and planning to apply for it later they can save it for future reference and apply when they are free. It is specifically designed to minimize misplacing your job advertisements.
